

IBM Security Network and Database Protection Solutions

March 12, 2018

Yavor Mihov
NDB LTD

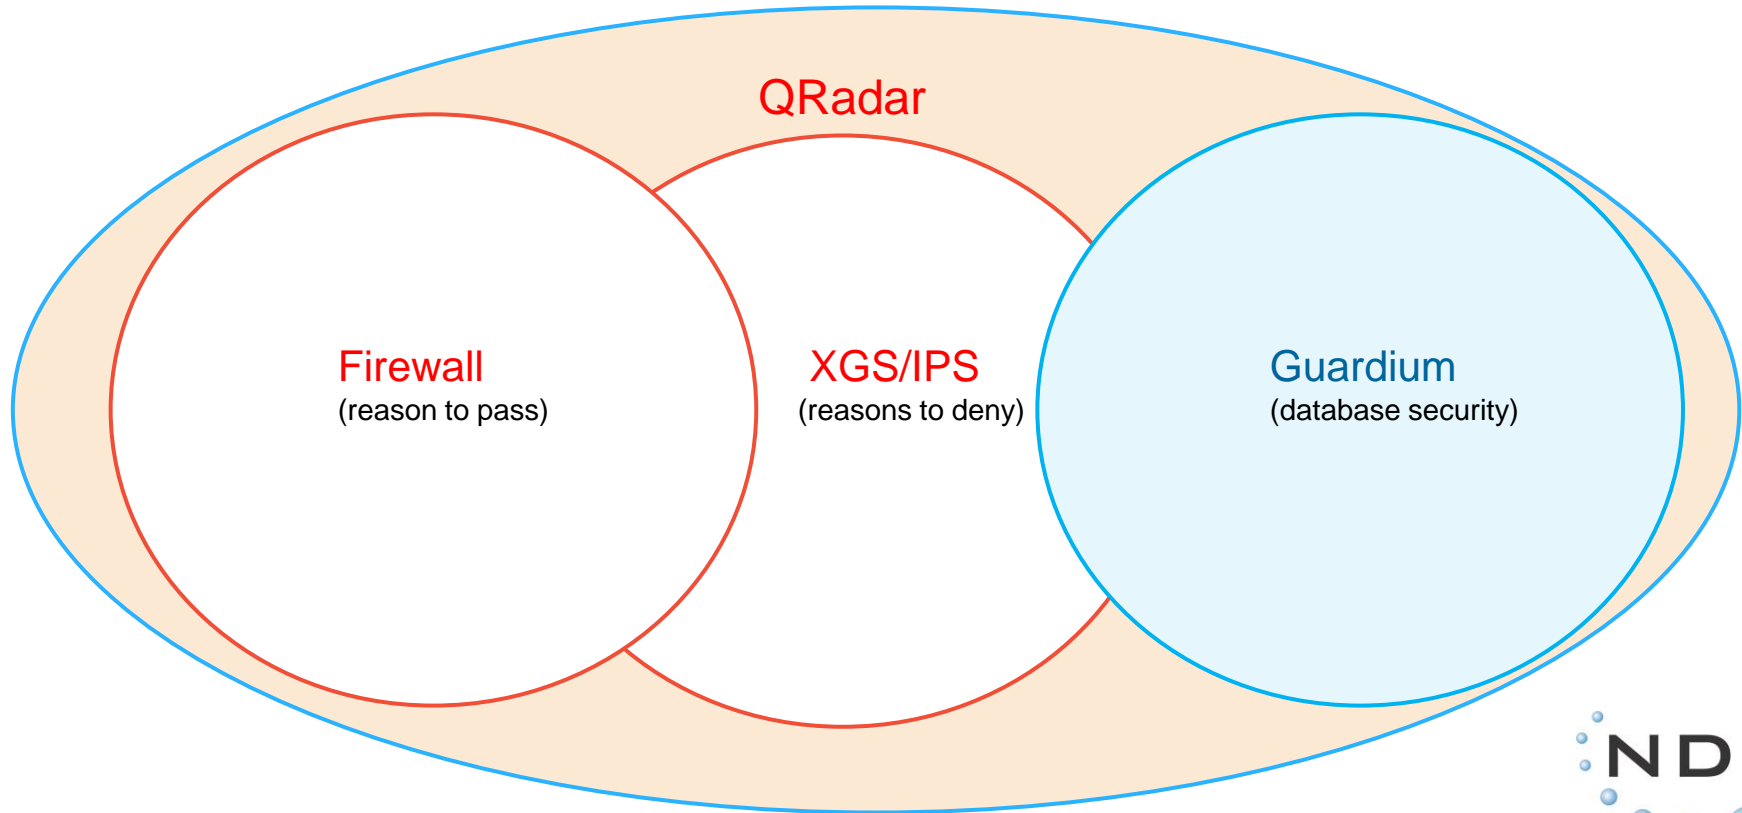

Agenda

1. IBM Security Solutions Integration
2. Guardium overview
3. Privileged users – risk and management

IBM Security Solutions Integration

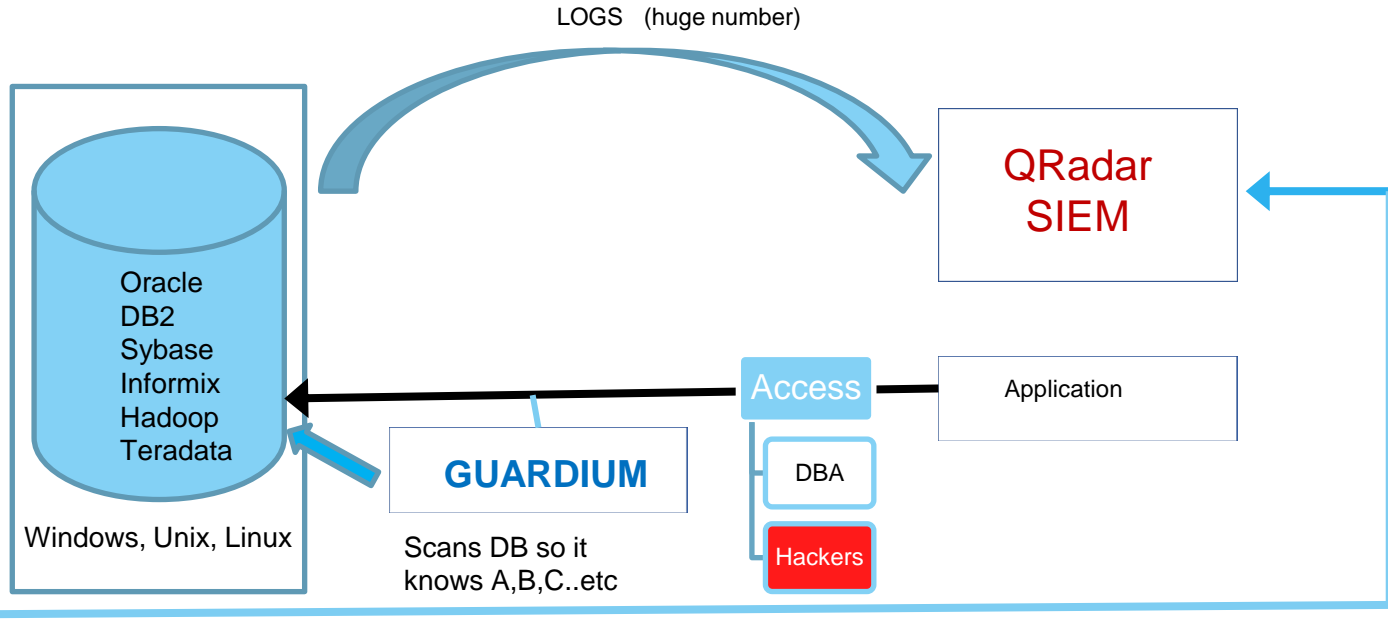

ASK DBA:

1. Which tables hold sensitive data?
2. Who Access That Data?
3. How much and when they access that data?

- 1.Expensive on the Database Server (CPU ↑ 15-20%)
- 2.Expensive on SIEM (EPS)
- 3.OK for compliance but not for security

SIEM is good at detection IPs that behave bad, scan. It can proactively suggest Guardium to Black List those IPs/Users

If a policy violation occurs, it can:

SET POLICIES

1. Notify, e-mail, sms, syslog
2. Mask Data xxx-xxx-3350
3. Terminate Session
4. All of the above

SET POLICIES

1. Only members of HR Group directory can access payroll DB and
2. Only during business hours
3. Cannot touch more that 20 records per day

THANK YOU
